INTERNSHIP

CodSoft | Virtual Internship

Developed Java mini projects including a Number Guessing Game, Student Grade Calculator, and ATM Interface System using OOP concepts. Strengthened Core Java skills such as loops, arrays, conditionals, classes, and methods through hands-on development. Improved debugging, logical thinking, and problem-solving abilities during a virtual internship environment.

Project

1. Adaptive Load Balancing (Final Year Project)

- Designed a dynamic traffic routing system using cloud-based architecture.
- Improved application performance and reduced latency through efficient load distribution.

2. High Availability Web Application using AWS ALB & Auto Scaling

- Deployed multiple EC2 instances behind an Application Load Balancer for high availability.
- Configured Auto Scaling and health checks for efficient traffic management and fault tolerance.

3. CI/CD Automation using GitHub Actions & AWS EC2

- Automated application deployment from GitHub to AWS EC2 using GitHub Actions.
- Configured secure SSH-based deployment workflow to improve deployment efficiency.
